Subject: Fw: Mitigation Labels 7173-258

dan - jennifer, LiphaTech and I have been going back and forth on some of the labeling comments that we have discussed for all the rereg. letters. attached at the bottom are Lipha's issues with their suggested text. i told Lipha that i will get back to them by the friday COB.

for -113 and -172 we agreed with basically, we agreed with Lipha completely on their point number one. for their second point, i think they have a point the there is redundancy that we could eliminate. i've taken a stab at rewriting it - see the attached document. and for the third comment - we don't think that we can change much here, except for incorporating the carcass language. Here is a summary of our comments.

rodenticide language.doc

for -258 both jennifer and i think that combining the Notes to Physician and Vet reduces redundancy. they both basically say the same thing. i think the important new addition here was the "Treatment for Pet Poisoning" statement which will stay.

can you please let me know what you think. again, quickly please since i owe them a response tomorrow. thanks...

john

Thanks John for your time on this. I understand your point and appreciate your explanation of the situation.

Unfortunately, I don't think you got the most up to date version of our concerns. Originally, I did say we weren't going to make a number of the required changes but, after working with Jennifer and discussing the issues internally, we had agreed to adding pretty much everything. However, our concern is in incorporating the language consistently.

I also have the same type of changes/additions for other products being required from Dan Peacock but the wording is substantially different. We are specifically looking for your approval on the language attached. We would like to know that the changes we are making can be considered "standard reregistration language," and will be allowed on all labels that we submit. We want to have this language nailed down in preparation for the massive label updates that will be done for the reregistration.

You are well aware that, in the past, we have had problems with different reviews incorporating these types of requirements in vastly different ways. We would like to get your approval on the language and be able to put it on all our reregistration labels with confidence that it will not be rewritten at random.

Jennifer has been very understanding and wonderful to work with on this issue and I have no doubt that we could easily come to some agreement on these labels but, as you can see, our concern is larger than that.

If you could take a quick look at the attached and let me know if there are any problems with incorporating these changes, I would really appreciate it.

I know your time is in high demand and I am grateful for your attention to this!

Kind Regards,
Rachel
